

AI Use Declaration Form

Course: Introduction to Artificial Intelligence

Lab Title: Lab 4 LLMs and Prompt Engineering for Decision Support

Student Name: Khadijah Mahrouf Yusif

Student ID: 43692028

GitHub Repository Link: <https://github.com/Dijah-Tunrayo/lab-4-llm-decision-support.git>

Date Submitted: August 16, 2026

1. AI Use Summary

Question	Student Response
Did you use any AI tool for this lab?	Yes
Estimated percentage of the work influenced by AI	18%
Did you attach evidence of AI use where applicable?	Yes

2. Details of AI Use

Complete the table below for each AI tool used. Add more rows where necessary.

Name of AI Tool Used	Purpose for Using the Tool	Prompt or Instruction Given to the Tool	Part(s) of the Work Influenced by the Tool	How I Verified, Edited, or Improved the AI Output
Claude Code	For aid in code help and understanding and also for code verification	Let's follow the steps here and teach me as we go	Code mainly,	I made sure to read through the code, edit it, fix bugs and obtain an understanding before implementing and using it
Grammarly	English grammar and syntax	No prompt given	Final Summary	I proofread and edited some parts to my understanding

3. Attachment of AI Output Evidence

Where required, attach evidence of AI use. Tick all that apply. Add more rows where necessary.

Now you've got a clean L003 vs L006 comparison. Let's draft the reasoning box.

Question 1: Compare L003 vs L006. Did the system identify the right strengths and red flags?

Try drafting this yourself — key contrast points you can pull from:

- L003: registered business (BN number), 3-year documented revenue history (GHS 22,000 December alone), actual collateral (GHS 5,000 fixed deposit), attached 18-month sales records → model correctly flagged strong, verifiable strengths
- L006: no business started yet, no revenue history, no collateral, relies purely on self-declared "trustworthiness" and friends' opinions → model correctly flagged this as weak/high-risk despite similar surface confidence in the letter's tone

Question 2: Why forbid "approve"/"reject"? One practical + one ethical reason.

Think about:

- **Practical:** what's the risk of an LLM being wrong or inconsistent (recall Section 1.2 — same input, different runs, non-zero variance) if it were making the actual lending decision instead of just flagging risks?
- **Ethical:** who is accountable if a loan is wrongly denied or wrongly approved — a human loan officer, or an LLM? What about regulatory/legal responsibility in lending decisions?

Give both a try and I'll review.

Within Gemini, the main tiers are:

- **Pro** (`gemini-pro-latest`) — most capable, best reasoning, slower and more expensive. Overkill for this lab.
- **Flash** (`gemini-flash-latest`) — the balanced pick: fast, cheap, good quality. What I recommended.
- **Flash-Lite** (`gemini-flash-lite-latest`) — fastest and cheapest, slightly less capable. Fine for simple tasks like your extraction/summarization here, and lets you burn through the free tier more slowly.

There are also dated snapshots (e.g. `gemini-3.6-flash`, `gemini-2.5-flash`) if you want a *fixed* model that won't change under you mid-project — useful for reproducibility, but some older dated snapshots are being shut down (like `gemini-2.5-flash` in October 2026), so you'd have to keep an eye on that.

For this lab, I'd still stick with `gemini-flash-latest` : it's capable enough for summarization/extraction/reasoning, has a generous free tier, and you don't have to worry about it being deprecated mid-project. If you hit free-tier rate limits, `gemini-flash-lite-latest` is the fallback.

Want to lock in Flash and move to Part 1.1, or try Flash-Lite instead?

1. Yes, for L003, the model was correctly able to identify strengths, with its registered businesses, employees, documented revenue, collateral, and clear repayment term. The red flags were minimal, while asking for more documentation.

For L006, the model was able to correctly flag some red flags, with no existing business, multiple unrelated ventures, no collateral, no financial history, and an unrealistic repayment timeline. The contrasting reviews are a testament to the model's ability to distinguish strong from weak applications.

2. a. Practical - The model lacks information that a human loan officer would have at their disposal. Like contact details, references, and document verification. Automated decisions based only on text would be unreliable and would miss context.

b. Ethical - In this situation, loan decisions contain life-changing consequences. If a model wrongly rejects someone, they might lose their business, livelihood or home. If it wrongly approves someone, they might fall into debt which they cannot repay. Keeping a human in the decision making loop ensures that responsibility is distributed appropriately and allows for appeals.

Good answers — both correct and well-reasoned. A few typo fixes needed: "employees" → "employeees", "ight" → "might", "lib=velihood" → "livelihood", "worngly" → "wrongly".

Content-wise, solid work — Q1 correctly contrasts the two applications, and Q2 gives genuinely distinct practical vs ethical reasons (missing verification capability vs. accountability/consequences).

Evidence Type	Attached? (Yes, No, N/A)	File Name
AI-generated draft	Yes	Image above
Prompt history	No	
Screenshot of AI interaction	Yes	Image above
Exported AI conversation	Yes	Image above
AI-generated code snippet	Yes	Image Above
Revised version showing student input	Yes	Image above

4. Student Declaration

I declare that:

Declaration Statement	Response (Yes/No)
The submitted work is my own work.	Yes
Any use of AI tools has been clearly declared in this form.	Yes
The prompts, instructions, and AI-generated outputs have been disclosed where applicable.	Yes
I reviewed, tested, edited, and improved any AI-generated content before submission.	Yes
My AI usage does not exceed 25% of the entire work.	Yes
I understand that undeclared or excessive AI use may be treated as academic misconduct.	Yes

Student Signature: K.M.Y
